Ciphr Payroll Update 2024-2 Release Notes

27 September 2024 | V1.0

Index

## Ciphr Payroll Release Notes 2024-2
For use by Ciphr staff and Ciphr customers only

New functionality

Validation of RTI submission files

From the 2024/2025 tax year onwards, Ciphr Payroll users will be able to validate RTI submission files against HMRC schema rules before submission to HMRC, ensuring higher quality results for the files submitted.

On the RTI Submissions dialog, users will see a new 'Validate' button positioned between the 'Edit' and 'Print' buttons.

To validate a file, select a row from the list and press the 'Validate' button. The selected RTI submission will be checked against the HMRC schema rules.

If the file contains errors, an error message will be displayed in a pop-up box.

For use by Ciphr staff and Ciphr customers only
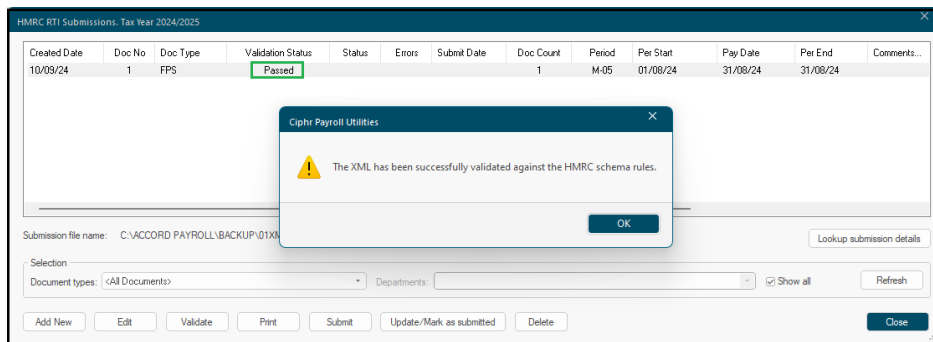

Successful validation will also be confirmed in a pop-up box.

Validation of the RTI files can be repeated multiple times if needed, and is optional, therefore does not prevent users from submitting the files.

Existing Functionality Changes

General Ledger: Update financial year message improvements

If you use the General Ledger module, the warning message that displays when closing your last payroll ending in the current calendar year has been simplified, and will now display as follows:
